Dashboard Review and Common Mistakes Analysis.

Overview of Changes

The updated dashboard enhances user experience by providing a borough-level analysis, aggregating ZIP codes into boroughs for a more structured and actionable view of complaints and violations. The introduction of a year selection feature enables users to analyze historical trends from 2020 to 2024. Additionally, a new visualization illustrates the impact of severity on resolution time, helping stakeholders prioritize urgent cases. By identifying the top buildings with the most complaints, the dashboard supports targeted enforcement efforts.

Common Mistakes Analysis

Based on the 13 common mistakes, the following improvements were made to address potential pitfalls:

- Inadequate Context:** The addition of Key Performance Indicators (KPIs) and clearer groupings now provides essential context for data interpretation, allowing users to quickly grasp key insights.
- Excessive Detail:** Visualizations have been simplified to reduce clutter while retaining critical details, making the dashboard more accessible and user-friendly.
- Indirect Measures:** Direct visual representations, such as bar charts for complaints, clarify the data and enable users to understand trends immediately.
- Inappropriate Media:** The dashboard now employs more relevant visualizations, including charts and maps, which enhance user engagement and facilitate better data exploration.
- Meaningless Variety:** Consistent design choices have been implemented throughout the dashboard, improving overall user experience and aiding data comprehension.
- Poorly Designed Media:** All visual elements have undergone re-evaluation for clarity and effectiveness, ensuring they serve their intended purpose.
- Inaccurate Quantitative Data Encoding:** Visuals now accurately represent data scales and comparisons, allowing users to make informed decisions based on reliable information.

Enhanced KPI metrics offer a snapshot of total complaints, as well as open and closed cases, improving decision-making. Furthermore, improved interactivity allows users to filter data by borough, year, violations, or complaints, offering deeper insights into the issues at hand.

Benefits of Improvements

- Enhanced User Experience:** The interactive features and visual clarity make the dashboard more user-friendly.
- Improved Decision-Making:** Access to comprehensive data and insights aids in informed decision-making processes.
- Increased Engagement:** The visually appealing design and interactive elements encourage users to explore the data more thoroughly.
- Targeted Actions:** New visualizations allow for focused interventions on high-complaint areas, facilitating better resource allocation.

Conclusion

The updated dashboard effectively addresses common mistakes, enhancing usability and providing valuable insights. The changes not only improve aesthetics but also empower users with actionable data.
